## 5G provides LEED Management Services for the first LEED Certified Holiday Inn in the Nation.

Sustainability is often thought of in the design of the building, but what about during construction? There are many things a General Contractor can do to help earn the project LEED credits and simply be responsible in their building processes.

Architect: Casabella Architects

General Contractor: MCC Design-Build

This Holiday Inn at Westover Hills is striving to become the **first Holiday Inn in the United States to achieve LEED Gold certification**. 5G is providing LEED Project Management Services for MCC Design-Build, a division of McSpadden Development Corporation.

5G's responsibilities cover all aspects of LEED coordination and documentation throughout the construction process. This ranges from designing a Construction Waste Management and Indoor Air Quality Plan to providing the documentation required in the project specifications and the LEED NC 2.2 Reference Guide.

Sustainability is not just a buzz word at 5G. It is a crucial part of our practice. We believe it is our responsibility to incorporate sustainable design principles in every project we are associated with.
